About Harris Farms Nurture Right 360 Incubator

The Nurture Right Incubator is a versatile and user-friendly device designed for hatching eggs of chickens, ducks, and pheasants. With advanced features such as an automatic egg turner, temperature and humidity control, and 360° visibility, hatching eggs has never been easier.

Key Features

1. Holds up to 22 chicken eggs, 12-18 duck eggs, and 22-24 pheasant eggs

2. 360° viewability for monitoring eggs from any angle
3. 360° induced airflow for optimal hatch rates
4. Humidity control with easy-to-read display and knob
5. Automatic egg turner with a convenient stop feature
6. Clear window for 360° wide view
7. Compact dimensions: 8.7 x 13 x 13 inches; 6.7 pounds

Safety Information

- Use only with the provided power supply unit.
- Place the incubator out of the reach of animals.
- Do not use the incubator on the floor to ensure fresh air circulation.
- This incubator is not a toy; children should be supervised by an adult when using it.

Power Supply

Connect the incubator to the provided power supply unit. Ensure a stable power source for uninterrupted operation.

Placement Guidelines

Place the incubator in an area out of reach of animals. Avoid using it on the floor to maintain proper air circulation. Children should be supervised when using the incubator.

Components

Egg Turner Layer: Accommodates 22 Chicken Eggs

Egg Tray: Used for preparing and holding eggs

Bottom of the Incubator: Contains essential components for operation

Harris Farms Nurture Right 360 Operation

Automatic Egg Turner

The incubator is equipped with an automatic egg turner that accommodates up to 22 chicken eggs. The timer starts a countdown of 21 days immediately after plugging in the unit. Egg turning stops 3 days before hatching to allow chicks to adjust themselves for ideal hatching.

Countdown Timer

The countdown timer ensures accurate tracking of the incubation period. It starts immediately after plugging in the unit and stops 3 days before hatching.

360° Visibility

The incubator features 360° viewability, allowing you to monitor eggs from any angle. Whether used as a chicken incubator or duck egg incubator, complete visibility of eggs is maintained throughout the incubation process.

360° Induced Airflow

Achieve optimal hatch rates with the incubator's 360° airflow circulation. This ensures uniform heat distribution and temperature stability for successful hatching, making it the perfect chicken egg incubator.

Easy-to-read Display

The user-friendly duck egg incubator features an easy-to-read humidity control display and knob. These advanced features are crucial for hatching eggs, where precise humidity is essential for successful hatching.

- Adjusting Humidity for Optimal Hatching
- Day 1 until 3 days before hatch day:
 - Fill the first half of the water pot marked "A."
 - Wait for 3-4 hours for the humidity to stabilize.
- Adjust the air vent knob to achieve approximately 52% humidity suitable for poultry.
- Last 3 days before hatch day:
 - Increase humidity by removing the red plug.

- Add both halves of the external water pot.
- Wait for 3-4 hours for the humidity to stabilize.
- Adjust the air vent knob to achieve approximately 72% humidity.

Preparing for Hatching

Egg Tray Removal

When the countdown reaches 3 days before the hatch, and the auto turner stops, the egg turner indicator will say OFF. This is a reminder to remove the egg turner from the incubator base.

Final Countdown (Last 3 Days)

During the last 3 days before hatch, follow the steps mentioned under “Last 3 days before hatch day” in the Humidity Control section to ensure optimal conditions for hatching.
