

VEVOR 24 Egg Incubator Manual PDF Download

February 6, 2024 by [Ossama Khattak](#)

The VEVOR 24 Egg Incubator is designed to create a uniform temperature and humidity environment inside the incubator, ensuring the successful hatching of eggs for various species. With features such as automatic egg turning, integrated temperature and humidity sensors, and high transparency, this incubator provides a hassle-free incubation experience.

Key Features:

1. **360° Air Circulation Design:** Promotes even distribution of temperature and humidity, ensuring uniform embryo growth and increasing hatching success rates.
2. **Integrated Temperature & Humidity Sensor:** Monitors temperature and humidity in real-time to prevent issues like cracked shells and ensure healthy embryo development.
3. **Automatic Egg Turning & Water Refilling:** Ensures every egg receives equal care and maintains constant humidity, creating an ideal hatching environment without the need for constant monitoring.
4. **High Transparency:** Transparent ABS material allows for clear observation of embryo development without lifting the lid, enhancing stability and providing built-in lighting for monitoring.
5. **Versatile Hatching:** Supports various species' needs, including small birds, poultry, and reptiles, with the option for power supply from both mains and battery sources.

Product Specifications:

- Dimensions: 16.5 x 16.3 x 7.1 inches
- Weight: 5.95 pounds
- Manufacturer: VEVOR
- ASIN: B0CJLQZXBV
- Country of Origin: China
- Model Number: N-24

Safety Instructions:

1. Ensure the incubator is placed on a stable and level surface to prevent tipping or accidents.
2. Keep the incubator away from water sources and moisture to avoid damage to electrical components.
3. Do not immerse the incubator in water or attempt to clean it while it is plugged in.
4. Use caution when handling eggs to prevent breakage and contamination.
5. Disconnect the power supply before performing any maintenance or cleaning tasks.

How to Use:

Here is how you can use this incubator.

Preparation:

- Place the incubator on a stable surface and ensure it is plugged into a power source.
- Fill the water reservoir with clean water to the recommended level.
- Insert the eggs into the egg trays, ensuring they are positioned with the pointed end facing downwards.

Setting Up:

- Press the power button to turn on the incubator.
- Use the control panel to set the desired temperature and humidity levels.

- The integrated sensors will monitor and regulate the environment automatically.

Incubation Process:

- The incubator will automatically turn the eggs every few hours to promote even heating and prevent adhesion.
- Monitor the temperature and humidity levels on the control panel regularly.
- Avoid opening the lid frequently to maintain a stable environment.

Hatching Duration:

- Chicken: Approximately 21 days
- Ducks: Approximately 28 days
- Parrots: Varies depending on the species, typically between 18-30 days

Maintenance:

- Clean the incubator regularly to remove any dirt or debris.
- Inspect the electrical components for any signs of damage or wear.
- Replace the water in the reservoir as needed to maintain humidity levels.
- Store the incubator in a dry and well-ventilated area when not in use.

Troubleshooting:

- If the temperature or humidity levels are not within the desired range, check the settings and ensure the sensors are functioning properly.
- If eggs are not hatching as expected, verify the quality of the eggs and adjust the settings accordingly.
- Contact customer support for assistance if any issues persist.

Important Note:

- Follow all safety instructions and guidelines provided in this manual to ensure the safe and successful use of the incubator.

- For further assistance or inquiries, please contact VEVOR customer support.
